- TI - Concentrated toxicity-free compound fertilizer
- AB - The present invention relates to a high-effective non-toxic green composite fertilizer which is made up by using vitamin B1, B3 and B6 (each 1%) and charred bone powder (97%), grinding them into finepowder, adding a small quantity of water and making them pass through the process of concentration. Said invention is applicable to growth of various crops, can be used for plant foliage fertilization and root irrigation, and can raise germination percentage of crops, raise their disease-resistance and lodging-resistance, make spik large, seedling sound and seeds plump, and improve quality of crops. The feeds made of the grains, vegetables and fruits produced by using said invented fertilizer are easy to be absorbed by human body, and possess medicinal health-care action.
